## Education

|                                                                                                   |                                      |
|---------------------------------------------------------------------------------------------------|--------------------------------------|
| <b>Texas A&amp;M University–Corpus Christi</b><br><i>M.S. in Computer and Information Science</i> | Ongoing<br>United States             |
| <b>Pandit Deendayal Energy University</b><br><i>B.Tech in Computer Science &amp; Engineering</i>  | Sep 2022 – Jun 2025<br>CGPA: 7.97/10 |
| <b>Government Polytechnic, Ahmedabad</b><br><i>Diploma in Computer Engineering</i>                | Aug 2019 – Jun 2022<br>CGPA: 9.11/10 |

## AI Projects & Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Independent AI Solutions Developer</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               | 2024 – Present |
| <ul style="list-style-type: none"><li>Built and shipped multiple AI-powered apps end-to-end — including RamayanaGPT, an AI Tutor mobile app, and an automated tech news pipeline (detailed under Projects below)</li><li>Integrated LLMs via REST APIs with prompt engineering and iterative evaluation to improve output quality and reliability</li><li>Demonstrated projects to non-technical users, gathered feedback, and maintained documentation for long-term handoff</li></ul> |                |

## Professional Experience

|                                                                                                                                                                                                                                                                                      |                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Full Stack Web Development Intern – BWS Certifications</b><br><i>Software Engineering Intern</i>                                                                                                                                                                                  | Jan 2025 – May 2025<br>India  |
| <ul style="list-style-type: none"><li>Delivered full-stack features using React.js, Django, Bootstrap, JavaScript, and Python with strong performance feedback</li><li>Built REST APIs, integrated backend services with frontend, and collaborated in Agile sprint cycles</li></ul> |                               |
| <b>Freelance Full Stack Developer</b><br><i>Full Stack Development</i>                                                                                                                                                                                                               | Jun 2025 – Nov 2025<br>Remote |
| <ul style="list-style-type: none"><li>Developed full-stack applications using React.js, .NET 8, and PostgreSQL, including scalable APIs and auth systems</li><li>Managed client requirements directly, translating non-technical needs into working technical solutions</li></ul>    |                               |

## Projects

|                                                                                                                                                                                                                                           |                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| <b>Campus Ride Pooling Mobile Application</b>                                                                                                                                                                                             | <i>React Native, Firebase, Node.js</i>         |
| <ul style="list-style-type: none"><li>Built a full-stack campus ride-sharing app with real-time ride creation, chat, Firebase Auth/Firestore/Cloud Functions, Stripe payments, Stripe Identity, and Mapbox route-aware matching</li></ul> |                                                |
| <b>Face Recognition Attendance System</b>                                                                                                                                                                                                 | <i>Python, FastAPI, OpenCV</i>                 |
| <ul style="list-style-type: none"><li>Attendance platform using 128-d face embeddings, blink-based liveness detection, JWT auth, RBAC, analytics dashboard, and CSV/XLSX export</li></ul>                                                 |                                                |
| <b>RamayanaGPT — Conversational AI Assistant</b>                                                                                                                                                                                          | <i>OpenAI API, REST, Prompt Engineering</i>    |
| <ul style="list-style-type: none"><li>Conversational AI assistant shipped end-to-end; LLM integration over REST with prompt engineering and iterative evaluation loops to keep answers reliable</li></ul>                                 |                                                |
| <b>AI Tutor Mobile App</b>                                                                                                                                                                                                                | <i>React Native, OpenAI API</i>                |
| <ul style="list-style-type: none"><li>AI tutoring app with OpenAI-powered conversations and prompts iterated specifically for teaching quality — LLM-powered learning shipped end-to-end on mobile</li></ul>                              |                                                |
| <b>Automated Tech News Pipeline</b>                                                                                                                                                                                                       | <i>Python, Text-to-Speech, Video Rendering</i> |
| <ul style="list-style-type: none"><li>Fully automated pipeline turning tech news into finished videos — text-to-speech narration and automated video rendering with no human in the loop</li></ul>                                        |                                                |
| <b>AI-Powered Retail Investor Dashboard</b>                                                                                                                                                                                               | <i>Python, React, SQL</i>                      |
| <ul style="list-style-type: none"><li>Dashboard combining multiple market-data sources into real-time insights; REST API backend and interactive React visualizations</li></ul>                                                           |                                                |

## Technical Skills

|                      |                                                                                                    |
|----------------------|----------------------------------------------------------------------------------------------------|
| <b>AI / LLM</b>      | OpenAI API, Prompt Engineering, RAG, LLM Evaluation, NLP, Workflow Automation, Agent-Based Systems |
| <b>Languages</b>     | Python, C++, Java, JavaScript, TypeScript, C#, SQL, HTML, CSS                                      |
| <b>Frontend</b>      | React.js, React Native, Next.js, Tailwind CSS, Bootstrap                                           |
| <b>Backend</b>       | Node.js, Express.js, Django, FastAPI, .NET 8, REST APIs                                            |
| <b>Databases</b>     | PostgreSQL, MongoDB, Firebase Firestore, SQLite                                                    |
| <b>Cloud / Tools</b> | Firebase, Stripe API, Docker, Mapbox, Git, JWT Auth, CI/CD (GitHub Actions)                        |
